

PROGRAM № 01

LAND-FIRST · LOW RISK

ONE LAYER QA
NO MIDDLE LAYERS
NATIONWIDE

STORE HEALTH SWEEP.

ONE VISIT. SIX CHECKS. EVERY STORE, EVERY QUARTER. FLAT PRICE, QUOTED FOR YOUR STORE COUNT.

WHY YOUR STORES NEED IT

Most retailers cannot produce a current inventory of the technology in their own stores. Payment devices move, UPS batteries silently age out, EAS gates drift out of tune, and nobody notices until a lane goes down on a Saturday.

The industry's answer is to wait for the failure, then bill you for the emergency. Ours is a scheduled quarterly sweep that catches problems while they are still cheap, and leaves you with photo-documented proof of everything in every store.

PCI 4.0

requires merchants to periodically inspect payment devices for tampering and keep device inventories. The sweep does it for you, with serialized photo evidence.

3-5 YRS

is the life of the UPS batteries protecting your POS from power events. Most chains have no replacement cycle at all.

\$300K+/HR

published estimates of large-retailer downtime cost. Prevention is not a luxury purchase.

1 IN 4

service visits fail first time across the industry, often because techs arrive blind. Sweep data means our techs never do.

THE SIX CHECKS · ONE TRUCK ROLL

SWEEP MANIFEST

AFTER-HOURS BY DEFAULT

PCI PAYMENT-DEVICE INSPECTION

- 1 Every terminal verified against inventory, tamper-checked, serial + seal photographed. Your QSA gets evidence, not assurances.

UPS BATTERY TEST & CYCLE

- 2 Load test, date check, and scheduled replacement before the battery fails during the power event it exists for.

STORE TECH ASSET INVENTORY

- 3 Photo-documented record of every device, model, serial, and location. Refreshed each sweep.

EAS GATE & RFID READER HEALTH

- 4 Gate detection test, deactivator check, RFID reader function verified. Loss prevention gets a signal, not silence.

CABLE HYGIENE & LABELING

- 5 Lane and back-office cabling dressed, labeled, and photographed. Future visits get faster and cleaner.

STORE REPORT CARD

- 6 Per-store closeout: findings, photos, risk flags, and a flat quote for anything that needs fixing. No obligation attached.

WHAT YOU HOLD WHEN WE LEAVE

A photo-documented map of the technology in every store, a prioritized risk list, and evidence files your compliance team can hand to auditors. Delivered per store, rolled up across the chain.
